

2010 – INSTALLATION OF ARCHITECTURAL BENDING EQUIPMENT

In 2010 Noble introduced architectural bending equipment to accommodate production of shapes to its customers. Many customers order shaped product and Noble would do like most other local window manufacturers; sublet these orders to be fulfilled by companies located in BC and Ontario. Noble provided the materials and the shapes were manufactured and shipped back to Noble. The lead time, and uncertainty of quality of production was always a concern to management.

In order to continue to provide Noble's exacting quality standards; plans were executed to purchase the equipment enabling Noble to produce shapes. Now customer requirements for virtually any shapes can be made by Noble. In addition to custom built square and rectangle shaped windows including rakes, now round windows, ovals and ellipticals are all produced locally in our manufacturing facility. Our customers now do not have any exorbitant freight costs and more importantly now do not have to experience unacceptable delays in receiving their orders. No more having to make do with inferior workmanship, after all, Noble's belief is when a customer pays for a product, they are entitled to receive the highest quality in product and workmanship that they pay for.

This equipment allows Noble to continue providing the quality products it is known for and maintain the corporate vision:

NOBLE PVC PRODUCTS & MANUFACTURING INC. Dedicated to providing

- **Quality workmanship**
- **Quality products**
- **Quality control**
- **Quality service**
