

2011 – INTRODUCING DOORS

In order to satisfy customer needs Noble has spent two years in determining what product selection is required that will enable Noble to manufacture a door that will perform equal to the quality Noble window system.

We are proud to say components have been identified, and set-up is underway at this time. The intention is a full launch of steel and fibreglass doors by summertime 2011.

We have started the season by offering substantial savings on all patio doors ordered by May 3rd 2011.

All patio doors, feature tempered glass, Dual Low E and Argon gas to provide top performance that is required for our climate.
