

## **2009 – EXPANSION TO ACCOMODATE GROWTH OF BUSINESS**

In 2008 plans were made to expand the manufacturing facility, doubling square footage by adding on to the present building. Engineered drawings were commissioned, and applications for building permits were taken out.

2008 was a very busy year, so much so that there was no time to construct the planned addition. Hindsight proves this to being fortunate, as in 2009 Noble undertook new construction to expand manufacturing capabilities to 4 times the square footage of previous facility. A brand new building was constructed, allowing benefits of forward planning and the ability to allow the best set-up and layout of equipment to maximize production. The added benefits of this new modern efficient facility again allows for economical operations with a low overhead enabling Noble to maintain a competitive edge on producing high quality windows.

Proof of the pudding is in the eating as the old saying goes, and the need to expand to accommodate increased volumes of window manufacturing proves out the forward thinking of management. The vision of providing a high quality product, with no compromises was the reason behind the strong and steady growth Noble has experienced since inception. By providing quality service, satisfied customers have been providing the best advertising, word of mouth and recommendations is the force that continues to fuel the growth of NOBLE PVC PRODUCTS & MANUFACTURING INC. today.
